

Next steps:

- learn about Eda
- identify possible issues with the projects( data, space, data cleaning issues, etc)
- find possible datasets
- read up on and understand different data cleaning models from kaggle and find the most efficient one?
- write in detail what y'all think the project is and come up with a solid model idea ( what yall want out of the project etc)

I think the project is

Write about the last point -
